

Photovoltaic panel power generation project in Greece

Overview

Broad development of solar power in Greece started in the 2000s, with installations of photovoltaic systems skyrocketing from 2009 because of the appealing feed-in tariffs introduced and the corresponding regulations for domestic applications of rooftop solar PV. However, funding the FITs created an unacceptable.

Solar power in Greece has been driven by a combination of government incentives and equipment cost reductions. The installation boom started in the late.

Two new photovoltaic parks are currently (August 2024) under construction in Western Macedonia with a total capacity of 1,000MW. This new energy project is.
