

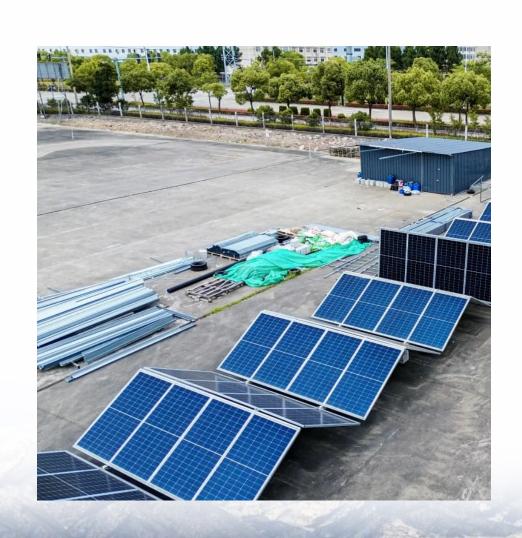

Photovoltaic power generation installation at a communication base station in Sierra Leone

Overview

Baoma Solar Power Station, is a 25 megawatts (34,000 hp) power plant under construction in . The first phase of this renewable energy infrastructure with generation capacity of 5 MW is operational and was commercially commissioned in December 2022. The second phase with generation capacity of 20 MW is under construction and is expected to come online in the Q4 of 2023. It is reported to be the first grid-connected solar farm in the country, built under a publi.

What's going on with a 50MW solar project in Sierra Leone?

Three Development Finance Institutions and a renewable fund manager have announced a co-investment for a 50MW solar power project in Sierra Leone. Three Development Finance Institutions and a renewable fund manager have announced a co-investment of more than \$52 million for Planet Solar, a greenfield 50MW solar power project in Sierra Leone.

Why is solar energy important in Sierra Leone?

We prioritize the use of renewable energy sources such as solar power to reduce greenhouse gas emissions, mitigate climate change, and preserve natural resources. By harnessing the abundant solar energy resources available in Sierra Leone, we contribute to a cleaner, greener future for generations to come.

Does Sierra Leone have a weak electricity grid?

Sierra Leone's grid only provides 13 megawatts per million people, about 3.5 times less than nations with similar socio-economic conditions. The weak electrical grid forces many citizens to purchase expensive oil and gas, and electric power remains scarce. New central solar power initiatives will help solve this problem.

Why should you choose a solar mini-grid solution in Sierra Leone?

By harnessing the abundant solar energy resources available in Sierra Leone, we contribute to a cleaner, greener future for generations to come. Ready to experience the benefits of off-grid solar mini-grid solutions?

Will Solar Park Freetown bolster Sierra Leone's shaky central power supplies?

In addition to providing manufacturing jobs to people who need it, Solar Park Freetown will bolster Sierra Leone's shaky central power supplies. Much of Freetown's power comes from the Bumbuna Dam, which, according to a 2011 World Bank report, produces less than 20 megawatts of power during the dry season.

Why is co-investment important in Sierra Leone?

The co-investment enables the development of a critical project that stimulates investment in renewable energy – responding to the urgent need for access to clean, affordable and stable power. Currently, only 23% of the population in Sierra Leone has access to electricity.
