

Rotating Energy Storage Dual Power Supply

Overview

What is a diesel rotary UPS system?

EURO-DIESEL's high performing NO-BREAK KS® is a Diesel Rotary UPS system that uses a kinetic energy accumulator as an energy storage device, instead of traditional large lead-acid battery cells.

What is a diesel rotary uninterruptible power supply (DRUPS)?

For years, we have been perfecting our trademark Diesel Rotary Uninterruptible Power Supply (DRUPS) system; the unique and advanced NO-BREAK KS®. More than this, using the NO-BREAK KS® means using a sustainable UPS system of high efi ciency that does not need bulky lead-acid battery banks.

How does a dual power supply work?

If the primary source fails or the voltage drops below a certain threshold, the switching circuitry instantly transfers power to the secondary source, providing uninterrupted power. By having a dual power supply, systems can experience increased reliability and redundancy.

How to ensure reliability of a dual power supply system?

3. Redundancy and redundancy testing: To maximize reliability, it is important to configure the dual power supply system with redundant power supply units. Additionally, regular testing of redundancy should be carried out to identify any potential failures and ensure seamless power supply switching.

What is dynamic uninterruptible power supply system?

What Dynamic Uninterruptible Power Supply Systems do?

Dynamic UPS systems provide perfect conditioned electrical power to critical consumers. In normal operating mode i.e. when the public power grid is available, a choke – an electromagnetic coil is used – to eliminate current and

voltage fluctuations that the power grid tends to produce.

How does a kinetic energy storage unit work?

Power from the public grid drives the synchronous alternator, which acts as an electric motor in this operating mode. This in turn drives the flywheel in the kinetic energy storage unit which weighs tons and is designed as an electric machine with double rotor system.
