

# Saudi Arabia New Energy Storage System Prices

#### **Overview**

Saudi Electricity Company (SEC) has secured two massive battery energy storage systems totaling 4.9 GWh at a cost of just USD 73-75 per kilowatthour (kWh) installed, marking a potential turning point for energy storage economics outside China. How many GWh of energy storage will Saudi Arabia have by 2025?

Projections indicate that Saudi Arabia aims to operate 8 GWh of energy storage projects by 2025 and 22 GWh by 2026, positioning the nation as the third-largest global market for energy storage, following China and the United States.

Why is Saudi Arabia launching a battery storage project?

Saudi Arabia aims to generate 50% of its electricity from renewables by 2030. However, renewable energy sources like solar and wind can be unpredictable. The 12.5 GWh battery storage project will solve this issue by storing energy and ensuring a steady power supply. This is very important in Saudi Arabia.

Why did BYD invest in Saudi Arabia?

The CTS (Cell-to-System) integration used in the Saudi project allows for better space utilization and higher energy density, ensuring maximum performance. This latest project in Saudi Arabia cements BYD's position as a global leader in energy storage.

Why is Saudi Arabia investing in lithium?

This surge in energy storage capacity is complemented by Saudi Arabia's strategic investments in the lithium supply chain, a critical component for battery production. Saudi Aramco, in partnership with state-owned mining company Ma'aden, plans to commence commercial lithium production by 2027.

Why does Saudi Arabia need MC cube-T ESS?

The nation's energy demand is high because of extreme temperatures and heavy electricity use. BYD's MC Cube-T ESS storage system will be installed at five locations across Saudi Arabia. These batteries use advanced Cell-to-System (CTS) technology, which improves efficiency and maximizes energy storage. This system will stabilize the grid.
