

Senegal s communication base stations have more wind and solar complementarity

Overview

How will Senegal contribute to the energy transition?

The country's nationally determined contributions outline two main goals relating to the energy transition: increasing the share of renewable energy in the national energy mix to 40 % by 2035 and increasing the use of natural gas to replace fossil fuel power plants (CDN Senegal, 2020).

Does Senegal have a solar energy sector?

Senegal's energy sector is increasingly reliant on solar power, making it essential to assess its long-term viability under changing climate conditions. This study evaluates future solar energy production in Senegal up to 2050, focusing on eight operational solar plants: Bokhol, Sakal, Malicounda, Kahone, Ten Merina, Mekhe, Ndiass, and Kael.

Is there a bias correction for solar energy production in Senegal?

Despite the higher resolution and detailed regional climate information provided by the CORDEX-CORE datasets, biases are noticed. These results suggest a bias correction to better estimate the future changes in solar energy production in Senegal. A bias correction is performed using the method described in Eq. 5 (Fig. 4b).

Do solar power plants in Senegal vary over time?

They found that Senegal experiences significant variability in solar resources over time and across different locations, depending on the year and specific site conditions. Niang et al. (2023) evaluated the seasonal performance of six solar power plants in Senegal, namely Bokhol, Sakal, Malicounda, Kahone, Ten Merina, and Mekhe.

How does solar production affect climatic conditions in Senegal?

The seasonal cycle of solar production over Senegal (Ten Merina) is largely influenced by solar radiation, with peak production occurring in March-April

and the lowest production during the rainy season (July-September). This demonstrates the dependence of solar production on climatic conditions.

Are GCMs accurate in Senegal?

However, the accuracy of the GCMs varies across different zones of the country. The central and northern parts of Senegal are better represented as compared to the southern part where the production is more overestimated by all the models. This could be due to the challenges faced by GCMs in simulating microclimate.

Senegal s communication base stations have more wind and solar c

Renewable Energy Investments in Senegal: Opportunities and ...

Renewable energy investments in Senegal primarily focus on solar, wind, and biomass energy projects. The Senegalese government has set ambitious targets to increase ...

<u>WhatsApp</u>

Complementarity assessment of wind-solar energy sources in ...

The inherent complementarity of wind and solar energy resources is beneficial to smooth aggregate power and reduce ramp reserve capacity. This article proposes a ...

WhatsApp

Assessing solar energy production in senegal under future climate

Although these studies characterized solar energy production across the country, projections of future solar energy production under climate scenarios are missing, leaving a ...

WhatsApp

The second wave of Senegal's energy transition: From HFO to ...

Senegal has rapidly increased its renewable capacity, in large part to decrease historical dependence on expensive and polluting liquid

fuels. The country pledged to source ...

WhatsApp

Complementarity and development potential assessment of offshore wind

To slow global warming, countries have formulated ambitious carbon reduction plans. Expanding the proportion of low-carbon energies (for example, solar and wind) in ...

WhatsApp

Offshore Wind Power Potential in Brazil: Complementarity

In addition, there is a benefit of these two sources' integration complementarity: the combined generation curve has a more subtle variation than the one and with solar only PV resources

WhatsApp

<u>Senegal: Energy Development Plan to Decarbonise the ...</u>

Senegal has significant solar resources and large wind potential. The costs of renewable energy generation are generally lower with stronger solar radiation and stronger wind speeds.

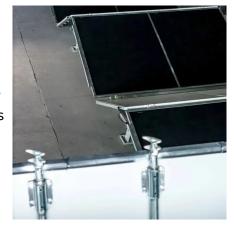

WhatsApp

Utility-scale solar PV and wind in Senegal: Overcoming regional ...

Solar PV and wind IPPs accounted for 21% of total annual power generation in 2022. On top of the changes in the market structure, Senegal has also undergone various reforms since the ...

WhatsApp

Exploiting wind-solar resource complementarity to reduce ...

Abstract: Resource complementarity carries significant benefit to the power grid due to its smoothing effect on variable renewable resource output. In this paper, we analyse literature ...

WhatsApp

EconPapers: Evaluating wind and solar complementarity in China

Overall, climate change is anticipated to have a negative impact on the future complementarity of wind and solar energy. In the 2060s, on an hourly scale, the complementary characteristic ...

WhatsApp

Temporal and spatial heterogeneity analysis of wind and solar ...

The results show that the temporal complementarity of wind and solar power among provinces is strong and exhibits significant seasonal differences, with the strongest ...
