

Serbia container power generation

Overview

How does Serbia generate electricity?

Serbia generates electricity through a mix of fossil fuels, hydropower, and renewable energy. The AERS 2023 report states that Serbia produced 37.68 TWh of electricity in 2023, ensuring a steady supply despite challenges with energy efficiency and growing demand.

What is Serbia's Electricity sector?

In this blog, we'll explore these areas and discuss Serbia's electricity sector and its future. Serbia generates electricity through a mix of fossil fuels, hydropower, and renewable energy.

How much electricity does Serbia produce in 2023?

The AERS 2023 report states that Serbia produced 37.68 TWh of electricity in 2023, ensuring a steady supply despite challenges with energy efficiency and growing demand. The majority of Serbia's electricity production still relies on coal, especially lignite.

Does Serbia have a transmission network?

Serbia's transmission network is connected to the European electricity grid, improving supply security and enabling cross-border exchanges. The AERS 2023 report highlights ongoing efforts to modernize transmission infrastructure. Key projects include building new power lines and expanding the national grid to support renewable energy integration.
