

Sierra Leone High Temperature Solar System

Overview

Do energy statistics exist in Sierra Leone?

"Energy statistics are difficult to obtain in Sierra Leone, especially for renewable energy. Although the conventional thermal energy production and consumption patterns have been reported, no consolidated set of statistics exists for the total Energy situation of Sierra Leone.

Does Sierra Leone need a 50MW solar power plant?

The 50MW solar capacity is expected to help avoid 53,000 tonnes of annual CO 2 emissions. The renewable energy potential in Sierra Leone is abundant, primarily in hydropower, wind and solar resources. However, it remains underutilised with up to 80% of the country's electricity generated from fossil fuels.

What is the average temperature in Sierra Leone?

The average temperature in Sierra Leone is approximately 26.02 degrees Celsius. This information is based on historical data from 1849 until 2013. The record high temperature reached 29.55 degrees Celsius in March of 2010, while the record low temperature was 21.95 degrees Celsius in January of 1889.

Why is co-investment important in Sierra Leone?

The co-investment enables the development of a critical project that stimulates investment in renewable energy – responding to the urgent need for access to clean, affordable and stable power. Currently, only 23% of the population in Sierra Leone has access to electricity.

Sierra Leone High Temperature Solar System

B-LFP48-200E Solar System Powers Healthcare In Sierra Leone

B-LFP48-200E is a high-capacity 51.2V 200Ah rack-mounted lithium battery with a 10.24kWh capacity and over 6000 cycles of lifespan. Using advanced lithium iron phosphate ...
