

# Solar Panel Industry Classification

#### **Overview**

Solar panels belong to the renewable energy sector, specifically the solar energy industry, which encompasses the technology and services associated with solar photovoltaic systems, the manufacturing of solar cells, and installation components for residential, commercial, and utility-scale solar projects. What are solar panel tiers?

Solar panel tiers are an industry-standard classification system that differentiates manufacturers based on factors such as financial stability, production volume, and technological innovation. Knowing how Tier 1 and Tier 2 solar panels differ can impact your installation cost, efficiency, longevity, and return on investment.

What is a solar panel manufacturer tier system?

The solar panel manufacturer tier system was developed by Bloomberg New Energy Finance (BNEF) to identify major brands in the solar industry. It identifies so-called "bankable" brands—those that are most "likely to be offered non-recourse debt financing by banks.".

Who qualifies as a Tier 1 solar panel manufacturer?

To qualify as Tier One, a solar panel manufacturer must have a track record of supplying products for significant installations exceeding 1.5 megawatts. Choosing TIER 1 solar panels offers numerous advantages for distributors, installers and end customers:.

What are Tier 2 solar panels?

'Tier 2 solar panels' is a term that's used to describe all solar panels that are not Tier 1. BloombergNEF only created criteria used to identify Tier 1 solar companies. As such, there are no official lists of Tier 2 or Tier 3 solar companies.

What is a Tier 1 solar panel?

Tier 1 solar panels are made by top manufacturers with strong financial stability, production scale, and technology innovation. As a result, they are usually more expensive but come with longer warranties and better customer service. One key thing to note: Tier 1 refers to the manufacturer, not the panel quality.

Are Tier 1 solar panels more expensive?

However, with Tier 1 solar panels, the chances of the solar panels having defects are lower. Tier 1 solar panels are typically 10-30% more expensive than Tier 2 solar panels. Are Tier 1 solar panels worth it?
