

Solar outdoor remote site energy prices

Overview

How much does an off-grid solar system cost?

An off-grid system costs between \$45,000 and \$65,000, with an average price closer to \$55,000. Cost varies based on your system size, type, and energy needs, as well as the components you choose. How long do off-grid solar systems last?

An off-grid system can last 25 years or more with proper maintenance.

Does an off-grid solar system work with a large home?

Yes, off-grid systems work with any residential home, even larger ones. Offgrid systems work best for remote homes or those with limited access to utility power. Due to their size and power capacity, off-grid systems are more expensive than grid-tied solar systems.

Do on-grid solar panels reduce electricity costs?

Though on-grid systems do reduce your electricity costs by relying mostly on solar energy, you still need grid-tied power when your solar panels aren't in use or sun hours are limited. An off-grid system lets you generate all of your own energy. This means you won't receive backup power from the grid during power outages or low-sunlight days.

Should you install an off-grid solar energy system?

When you install an off-grid solar energy system, you won't depend on an external provider for electricity. This gives homeowners peace of mind, knowing their home will continue operating smoothly during emergencies. Going off-grid means no longer relying on utility companies and their fluctuating electricity rates.

Where can I get technical support for my solar system?

We pride ourselves on providing the best technical support in the industry.

Call toll-free (877) 297-0014 for expert assistance. Low wholesale prices on complete enclosed off-grid solar systems for radio, data, monitoring & other industrial applications. Over 20 years of experience.
