

Solomon Islands Power Supply Solar System Production

Overview

How many solar homes are there in the Solomon Islands?

“Solomon Islands currently has one of the lowest levels of access to electricity in the region, with over 85% of the population of Solomon Islands still without access to electricity and for this project alone, we received over 6,000 applications to obtain only 2,000 solar home systems,” said Mr Aimaea.

What is the main source of electricity in Solomon Islands?

In Solomon Islands, electricity is primarily generated through the combustion of fossil fuels. The demand for power in Honiara, the capital, has been increasing rapidly since 1996, but the power plants have not been able to keep up with the demand.

What is the power generation capacity of Solomon Islands?

The power generating capacity of the Solomon Islands is currently 10.2 MW, which is equal to its peak load capacity. One mining company in the Solomon Islands generates its own electricity with a power capacity of 11 MW and a peak load of 8 – 9 MW.

Why is the energy supply of Solomon Islands inefficient?

The energy supply in Solomon Islands is inefficient due to inefficient generation, transmission, and end-use technology such as air conditioning systems, lighting, industrial machinery, and negligence.

Can micro-hydro supply the Solomon Islands' electricity needs?

It is suggested micro-hydro has the potential to supply the significant bulk of Solomon Islands' electricity needs. However, it is argued that current international donor transparency procedures associated with feasibility studies have created an environment that stalls developments.

How many hydroelectric systems are there in Solomon Islands?

The left option uses a canal with pipeline (penstock) and the right option uses a pipeline (penstock) only. There are currently nine hydroelectric systems in Solomon Islands with no system greater than 150kW. Six are operational and these are all community owned with five implemented by the Australian NGO, Apace7.
