

South African power storage

Overview

Why is energy storage important in South Africa?

South Africa is at a pivotal moment in its energy transition: trying to decarbonise its economy (move away from coal) and make sure that everyone has access to reliable and affordable energy. Storage of renewable energy is very important for this transition. Solar and wind power are not available all the time.

Why should we invest in battery energy storage in South Africa?

We applaud the South African government's commitment and dedication to the renewable energy procurement programmes. Battery energy storage will continue to play an important role in the energy transition, and we will continue to be at the forefront across our core markets," says Scatec CEO Terje Pilskog.

Is storage a solution to South Africa's energy crisis?

Ezzat Sankari, Sungrow, Middle East, Africa, and Central Asia. South Africa faces rising demand for electricity and is aiming to achieve ambitious decarbonisation goals. While renewable energy is heralded as a key solution, it needs storage as a supplementary solution to meet its full potential in contributing to national power supply.

How does battery storage work in South Africa?

Battery storage systems offer a solution by storing surplus energy generated during peak production periods and releasing it when demand is high, ensuring a consistent and reliable power supply. The South African government has acknowledged the potential of battery storage and has set ambitious targets for its deployment.

Are dispatchable energy and grid infrastructure the future of South Africa?

"Dispatchable energy and grid infrastructure are now more important than

ever, in the pathway to unlock the sustainability of South Africa's current and future energy system," adds Alberto Gambacorta, GM and EVP Sub-Saharan Africa, Scatec.

What is the outlook for South Africa's Energy Future?

So far, the outlook is good: renewable sources now generate over 8% of South Africa's electricity, and the government last year announced a bid window to add almost 15,000 MW of further renewable capacity, which should help put an end to recurrent power shortages.
