

Syria exports energy storage companies

Overview

What is the outlook for Syria's Energy Resources & Infrastructure?

A quick outlook regarding Syria's energy resources and infrastructure, including the role of declining oil revenue under the Assad regime's governance and the prospects for, and geopolitical impact of, Syrian energy production and trade in a new era.

Does Syria have a good energy supply?

The lack of reliable energy supplies is a major concern for Syrian citizens and its new government. Syria's oil and gas sector is in an even worse state. Before 2011 the country was an oil exporter producing 400 000 barrels of oil per day. Today, it scarcely produces 20 000 and relies on imports.

What is Syria's oil and gas sector like today?

Syria's oil and gas sector is in an even worse state. Before 2011 the country was an oil exporter producing 400 000 barrels of oil per day. Today, it scarcely produces 20 000 and relies on imports. Its gas sector, nascent in 2011, is almost none-existent today.

Is Syria's energy system in ruins?

Syria's energy system is in ruins. To rebuild energy security the country's new government faces two major challenges. The first, vital for Syria's swift recovery and political stability, is bringing reliable flows of electricity and fuel to its people.

Should Syria become an energy hub?

In the longer term, it should offer Syria a role in an interconnected Eastern Mediterranean energy hub with independent access to the EU market for gas and electricity. For more than a decade, Syrians have been coping with severe energy shortages. Years of war and division have crippled over 50% of the country's electricity grid.

Will Syria increase its oil and natural gas volumes?

Syria has significant potential to increase its oil and natural gas volumes. Syria can also serve as a transit state for natural gas from Israel and other producers in the Eastern Mediterranean to Turkey and onward to Europe. Turkey will play a major role in Syria's reemerging energy sector.
