

Thailand Luojia Energy Storage Power Station

Overview

Does Thailand need a battery energy storage system?

Thailand may lack the Battery Energy Storage Systems (BESS) necessary to navigate supply and demand challenges. The 2024 PDP draft included 10,000 MW of BESS, but this may see the country struggle to fulfil carbon neutrality and Net Zero commitments over the coming decades.

Why is battery storage a problem in Thailand?

This is partly due to a lack of clarity on how battery storage fits into existing electricity infrastructure. In 2022, the Thai government approved 24 BESS projects, all of which were located alongside solar operations. Their total combined storage capacity was 994 MW.

Does Thailand need a flexible power system?

While the Thai power system has significant latent flexibility and a high reserve margin, it will nevertheless need to adapt to the greater need for flexibility that comes with ongoing changes on both the demand and supply side. Thailand's power sector has two main avenues to enhance its flexibility.
