

# The cost-effectiveness of energy storage batteries

### **Overview**

Are battery energy storage systems worth the cost?

Battery Energy Storage Systems (BESS) are becoming essential in the shift towards renewable energy, providing solutions for grid stability, energy management, and power quality. However, understanding the costs associated with BESS is critical for anyone considering this technology, whether for a home, business, or utility scale.

Are battery electricity storage systems a good investment?

This study shows that battery electricity storage systems offer enormous deployment and cost-reduction potential. By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials.

How does battery energy storage affect the value of a battery?

The paper found that in both regions, the value of battery energy storage generally declines with increasing storage penetration. "As more and more storage is deployed, the value of additional storage steadily falls," explains Jenkins.

How much does energy storage cost?

Assuming N = 365 charging/discharging events, a 10-year useful life of the energy storage component, a 5% cost of capital, a 5% round-trip efficiency loss, and a battery storage capacity degradation rate of 1% annually, the corresponding levelized cost figures are LCOEC = \$0.067 per kWh and LCOPC = \$0.206 per kW for 2019.

Are battery storage and solar power complementary?

However, in some cases, the continued decline of wind and solar costs could negatively impact storage value, which could create pressure to reduce

storage costs in order to remain cost-effective. "It is a common perception that battery storage and wind and solar power are complementary," says Sepulveda.

What happened to battery energy storage systems in Germany?

Small-scale lithium-ion residential battery systems in the German market suggest that between 2014 and 2020, battery energy storage systems (BESS) prices fell by 71%, to USD 776/kWh.
