

Total investment in wind solar and lithium storage

Overview

London, August 26, 2025 – Global investment in new renewable energy projects hit a record \$386 billion in the first half of 2025, up 10% from the previous year. How much funding is there for lithium-ion battery energy storage?

No wonder there is so much attention on the funding of lithium-ion battery energy storage systems (BESS). The DOE announced over \$3 billion in BESS grants in 2024 for 25 selected projects across 14 states. BESS provides up to four hours of energy storage. That's a good start.

What percentage of lithium-ion batteries are used in the energy sector?

Despite the continuing use of lithium-ion batteries in billions of personal devices in the world, the energy sector now accounts for over 90% of annual lithium-ion battery demand. This is up from 50% for the energy sector in 2016, when the total lithium-ion battery market was 10-times smaller.

How has the inflation Reduction Act impacted battery storage?

With the rise of solar and wind capacity in the United States, the demand for battery storage continues to increase. The Inflation Reduction Act (IRA) has also accelerated the development of energy storage by introducing investment tax credits (ITCs) for stand-alone storage.

What is the share of renewables in total capacity expansion in 2024?

The share of renewables in total capacity expansion has increased significantly in 2024 and reached 92.5%, compared to 85.8% in 2023. The renewable share of total installed power capacity also rose by more than three percentage points from 43.1% in 2023 to 46.4% in 2024.

What are the options for long duration energy storage (LDEs)?

Here are some of the main options for long duration energy storage (LDES). Mechanical energy storage solutions are among the most mature of the LDES

options. This category includes two primary forms of mechanical technologies: compressed air energy storage (CAES) and pumped hydro systems.

How has the IRA accelerated the development of energy storage?

The Inflation Reduction Act (IRA) has also accelerated the development of energy storage by introducing investment tax credits (ITCs) for stand-alone storage. Prior to the IRA, batteries qualified for federal tax credits only if they were co-located with solar. Wind.

Total investment in wind solar and lithium storage

Clean Energy Investing in America

The new incentives ofer companies significant opportunity to invest in new utility-scale wind, solar, and storage projects and manufacturing facilities, while passing on savings to American ...
