

Uninterruptible power supply installation at night in the base station room

Overview

What is an uninterruptible power supply (UPS)?

Uninterruptible Power Supplies (UPS) safeguard your electronics against power outages, surges, and fluctuations. Whether you are setting up a UPS for a home, a UPS for an office, or a UPS for a data center, this beginner's UPS setup guide will walk you through every aspect of the UPS installation process.

Do you need an uninterruptible power supply?

An uninterruptible power supply will provide years of reliable service if it is installed correctly and maintained. Whether your server room or datacentre has single or three phase UPS systems, similar planning is required to ensure that the UPS is installed correctly and powers all the loads it is expected to.

How do you Power an uninterruptible power supply?

Planning how to power the loads from the uninterruptible power supply is an important exercise. Smaller single-phase UPS use rear panel IEC type connectors to which PDUs, or a UPS maintenance bypass switch can be connected. If a UPS maintenance bypass switch is installed the PDU and load connection may be via a sub-distribution board.

What is the critical power path within a ups installation?

The critical power path within a UPS installation runs from the loads connected to the power distribution units (PDUs) to the UPS that power the PDUs and to the UPS electrical supplies and potentially the building incomer. Planning how to power the loads from the uninterruptible power supply is an important exercise.

Can an electrical contractor install an UPS system?

Electrical installation is therefore specialist work and a suitable qualified NICEIC or ECA electrical contractor will be able to install the UPS system. The

UPS installation may require additional distribution panels and uprated circuit breakers.

How do I install a hardwired UPS system?

Hardwired UPS systems should be installed by a UPS specialist or the UPS supplier. The first step in installing a UPS system is to determine the power needs of your facility. This includes identifying the number and types of devices that will be connected to the UPS, as well as the total power consumption of those devices.
