

# Use of energy storage batteries and batteries

#### **Overview**

What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to provide electricity or other grid services when needed.

Why is battery storage important?

For several reasons, battery storage is vital in the energy mix. It supports integrating and expanding renewable energy sources, reducing reliance on fossil fuels. Storing excess energy produced during periods of high renewable generation (sunny or windy periods) helps mitigate the intermittency issue associated with renewable resources.

Are batteries the future of energy storage?

The time for rapid growth in industrial-scale energy storage is at hand, as countries around the world switch to renewable energies, which are gradually replacing fossil fuels. Batteries are one of the options.

Why do we need batteries?

Batteries play a crucial role in integrating renewable energy sources like solar and wind into the grid. By storing excess energy generated during periods of high production and releasing it during periods of low production, batteries help mitigate the intermittency of renewables and ensure a stable energy supply.

How does a battery storage system work?

Energy is released from the battery storage system during times of peak demand, keeping costs down and electricity flowing. This article is concerned with large-scale battery storage systems, but domestic energy storage systems work on the same principles. What renewable energy storage

### systems are being developed?

.

What types of batteries are used in energy storage systems?

Several types of batteries are used in energy storage systems, each with distinct pros and cons: The main chemistries in energy storage systems are LFP (Lithium Iron Phosphate) and NMC (Lithium Nickel Manganese Cobalt Oxide). Lithium-ion batteries are the most commonly used type for energy storage due to several reasons:
