

What is the proportion of energy storage power station revenue

Overview

How do I evaluate potential revenue streams from energy storage assets?

Evaluating potential revenue streams from flexible assets, such as energy storage systems, is not simple. Investors need to consider the various value pools available to a storage asset, including wholesale, grid services, and capacity markets, as well as the inherent volatility of the prices of each (see sidebar, "Glossary").

What is the 'value stack' in energy storage?

Owners of batteries, including storage facilities that are co-located with solar or wind projects, derive revenue under multiple contracts and generate multiple layers of revenue or 'value stack.' Developers then seek financing based on anticipated cash flows from all or a portion of the components of this value stack.

Do investors underestimate the value of energy storage?

While energy storage is already being deployed to support grids across major power markets, new McKinsey analysis suggests investors often underestimate the value of energy storage in their business cases.

What is the source of revenue for many power projects?

For many power projects, a single power purchase agreement provides the source of all revenue for the project. Fixed-price contracts allow a project to generate a relatively predictable and stable amount of revenue, subject to the project meeting technical operating assumptions.

Can energy storage improve the performance of the electricity grid?

The energy storage sector in the United States has been thriving in the past years, with several applications to improve the performance of the electricity grid, from frequency regulation and load management to system peak shaving and storing excess renewable energy generation.

What is the growth rate of industrial energy storage?

The majority of the growth is due to forklifts (8% CAGR). UPS and data centers show moderate growth (4% CAGR) and telecom backup battery demand shows the lowest growth level (2% CAGR) through 2030. Figure 8. Projected global industrial energy storage deployments by application
