

# Where Home Energy Storage is Affordable in the US

#### **Overview**

What's going on with residential energy storage?

Residential energy storage installations just hit an all-time high, and US gridscale energy storage is coming on fierce. With a record-breaking 346 MW of residential storage built in Q3 2024 — a 63% increase over the previous quarter — the residential energy storage market has reached an all-time high.

Will energy storage continue through 2025?

And you can expect both trends to continue through 2025. ACP and Wood Mackenzie's latest Energy Storage Monitor highlights rapid growth in Texas and California, where grid operators ERCOT and CAISO have been particularly eager to embrace storage as a solution to constraints and resiliency concerns.

Which states have more battery storage?

Only California brought gigawatt hours online, 6 GWh, thanks to the state's focus on longer-duration storage. Arizona, Colorado, Florida, and Vermont also added storage last quarter, hinting at a much larger appetite for grid-scale battery deployment nationwide.

Why is energy storage important?

ACP adds that increased energy storage deployment not only enhances reliability and affordability but also drives U.S. economic expansion, supporting growing industries like manufacturing and data centers. "Energy storage is crucial for energy security and to help outpace rising demand," chimed Noah Roberts, ACP's VP of energy storage.

Which states are ready for grid-scale energy storage deployment?

Installations in Arizona, Colorado, Florida, and Vermont also occurred in Q3, indicating a national desire for grid-scale storage deployment. "The rapid

energy storage deployment we're seeing in the United States not only enhances reliability and affordability but also drives economic expansion.
