

# **Zambia Grid Energy Storage**

#### **Overview**

A new partnership between Grid Africa and China-based CEGN is set to deploy 50 MWh of battery energy storage in Zambia, supporting wider adoption of solar power, especially beyond daylight hours. What is beyond the grid Fund for Zambia?

Beyond the Grid Fund for Zambia is an ambitious new undertaking to bring basic clean energy access to one million Zambians and accelerate private-sector growth in energy generation and distribution in the country.

Will Zambia invest in off-grid solar energy?

In collaboration with the World Bank, the Common Market for Eastern and Southern Africa (COMESA), the Africa Minigrid Development Association (AMDA), and other partners, the Government of Zambia is redoubling its efforts to invest in off-grid solar energy throughout the country to connect all Zambians.

How does the World Bank support Zambia's Electricity access initiatives?

The World Bank is supporting Zambia's electricity access initiatives, including the development of mini-grids, through projects like the Electricity Services Access Project (ESAP) and the Zambia-Tanzania Interconnector Project (ZTIP), aiming to expand access to affordable and sustainable energy.

How many solar mini-grids will Zambia have by 2030?

"Our target is to have at least 200 solar mini-grids operational by 2030, ensuring that every rural district in Zambia has access to clean, affordable, and reliable electricity," said Makozo Chikote, Minister of Energy of Zambia.

How many Zambians are still without electricity?

Solar home systems, which are rooftop solar panels that provide electricity for lighting, charging phones and running certain appliances, and mini grids, which are solar electricity generation and storage plants that provide

electricity to whole villages – have the potential to reach 8.5 million Zambians currently still without electricity.

Does Zambia need a new energy source?

LUSAKA, April 1, 2025 – Access to electricity in Zambia has risen from 30% in 2017 to currently nearly 50%. Whilst half of the population is connected, the remaining half will require new energy solutions. Zambia currently relies on hydropower for 80% its electricity generation, but recent droughts have shown the limitations of this energy source.
